

ABSTRACT OF THE DISCLOSURE

The present invention concerns biomolecular complexes and in particular a method for linking biomolecules in sets of two or more, with predefined three-dimensional orientation and spacing between the two or more biomolecules. The linking method has application in the construction of novel, highly specific vehicles for drug delivery, e.g. in gene therapy, and in the construction and performing of assays for the study of biomolecular interaction, e.g. receptor-ligand interaction studies.
